

R&D is looking for an Electrical Service Technician

Job Reference:JOL66

Do you have years of experience working with medium voltage and enjoy a varying work day?

We are looking for an experienced Electrical Service Technician to support our Service team. We are also interested if you are a tight-knit team of two who are used to working together. Your work will entail service and installation of low and medium voltage industrial facilities with focus on medium voltage.

Your role

As our new Service Technician, your efforts will be divided between service of existing medium voltage equipment and facilities for our customers, and installation of new test facilities both for new and existing customers - including supervision of subcontractors. Your focus will be on medium voltage facilities and your tasks will be very diversified, giving you a everchanging workday.

Our customers are big industrial companies based around Denmark, as well as Europe. With your expertise, we expect you to be present when necessary on site, which can be up to days at a time including overnights. Some of your time will be spent at our office in Hinnerup for practical input to our el team, but as Electrical Service Technician, you will travel for service and installation at our customers' locations – both in Denmark, but also worldwide. Expected travel days will vary.

Your work efforts is expected to be spent with approximately 40% for medium voltage, 40% for low voltage and 20% office work.

The job entails:

- Work at 0.4/10/15/33 kV
- Mounting and commissioning of new low and medium voltage facilities
- Maintenance, service and inspection of 0.4/10/15/33 kV facilities
- Work with medium voltage sockets
